### Email 1A — CTO / Head of IT

Subject: Is your Windows infrastructure ready for the next decade?

Dear [Customer Name],

Many organisations across the Kingdom are reviewing Windows Server environments as licensing costs rise, infrastructure ages, and resilience requirements become more demanding.

At cloudwrxs, we help technology teams modernise Windows workloads on AWS, using the AWS Software Discount Program (SDP) to reduce cost while improving performance, security, and availability.

Our Windows modernisation approach helps you:

- Identify workloads suitable for AWS EC2 migration
- Reduce Windows licensing and infrastructure cost
- Improve HA/DR for critical Windows systems
- Strengthen security with AWS-native controls
- Build a practical roadmap without committing to a full migration upfront

As part of this campaign, we are offering a complimentary Windows Estate Assessment. In a short session, we can review your current Windows landscape and highlight cost, resilience, and modernisation opportunities.

You can request the assessment here: <https://cloudwrxs.com/homepage-cto/>

Kind regards,

[Your Name] [Your Title] cloudwrxs

### Email 1B — CFO / Finance Director

Subject: Reducing Windows infrastructure cost without adding risk

Dear [Customer Name],

Windows Server licensing and infrastructure can represent a significant IT cost, but many organisations have limited visibility into utilisation, refresh risk, and where savings may be available.

At cloudwrxs, we help finance and technology leaders assess Windows workloads and model potential savings through AWS EC2 and the AWS Software Discount Program (SDP).

Our Windows cost review helps you:

- Establish a current Windows cost baseline
- Identify over-provisioned or under-utilised infrastructure
- Compare on-premise cost against an AWS SDP model
- Reduce refresh-cycle exposure
- Improve predictability and visibility across Windows workloads

We are currently offering a complimentary Windows Estate Assessment for organisations reviewing Windows cost, resilience, or migration options.

If this is useful, you can request the assessment here: <https://cloudwrxs.com/finops>

Kind regards,

[Your Name] [Your Title] cloudwrxs

## Email 1C — IT Infrastructure Manager

Subject: Simplifying Windows operations on AWS

Hi [Customer Name],

Windows environments often require a lot of operational effort: patching, backups, monitoring, Active Directory support, performance management, and disaster recovery planning.

At cloudwrxs, we help infrastructure teams modernise Windows workloads on AWS, reducing manual effort while improving visibility, resilience, and cost control.

Our Windows Estate Assessment can help identify:

- Manual operations that can be automated
- Performance and stability gaps
- Backup and DR improvement areas
- Windows workloads suitable for AWS EC2
- Cost optimisation opportunities through AWS SDP

We are offering this assessment at no obligation for organisations reviewing their Windows infrastructure.

You can request the assessment here: <https://cloudwrxs.com/ITM>

Best regards,

[Your Name] [Your Title] cloudwrxs

## Email 2 — Follow-Up / Technical & Financial Deep Dive

Subject: Re: Windows modernisation and SDP savings

Dear [Customer Name],

Following up on my previous note regarding Windows infrastructure modernisation.

Many teams we speak with are balancing three priorities: reducing Windows licensing cost, improving resilience, and avoiding disruption to critical systems.

With cloudwrxs and AWS SDP, the starting point is not a full migration commitment. It is a practical assessment of your current Windows estate, including:

- Current server footprint and utilisation
- Licensing and infrastructure cost baseline
- HA/DR and backup readiness
- Security and compliance considerations
- Candidate workloads for AWS EC2

From there, we can show where savings, simplification, and risk reduction may be possible.

If Windows cost or stability is on your agenda, I would welcome a quick 20-minute discussion.

Assessment links:

- CTO / Head of IT: <https://cloudwrxs.com/homepage-cto/>
- CFO / Finance Director: <https://cloudwrxs.com/finops>
- IT Infrastructure Manager: <https://cloudwrxs.com/ITM>

Best regards,

[Your Name]

## Email 3 — Case Study / Proof Point

Subject: How one enterprise reduced Windows cost and improved reliability

Dear [Customer Name],

One regional enterprise we supported was running critical Windows workloads on ageing infrastructure, with rising licensing cost, manual recovery procedures, and repeated performance issues.

The initial step was a Windows estate assessment. From there, we identified practical changes across licensing, architecture, backup, recovery, and monitoring.

The outcome included:

- Lower Windows infrastructure and licensing cost
- Improved uptime for critical systems

- Faster recovery planning
- Reduced manual operational effort
- A clearer roadmap for AWS migration

If similar issues exist in your Windows environment, cloudwrxs can run a short assessment and share where the biggest opportunities may be.

You can request the assessment here:

- CTO / Head of IT: <https://cloudwrxs.com/homepage-cto/>
- CFO / Finance Director: <https://cloudwrxs.com/finops>
- IT Infrastructure Manager: <https://cloudwrxs.com/ITM>

Kind regards,

[Your Name]
